DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Wednesday, 08 September 2021 at 05:34 local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: Widespread areas of Moderate air pollution are expected across England, Wales and southern Scotland early today due to the warm and sunny conditions. Isolated pockets of High air pollution levels are possible, most likely across central and eastern England where there is a build-up of locally emitted pollution. Increasing winds from the south-west will gradually improve air quality throughout the day.

Tomorrow: Predominantly Low levels of air pollution are expected tomorrow as the weather turns more unsettled, cooler and breezy.

Outlook: Low levels of air pollution are expected in the outlook period as unsettled weather brings a cooler, cleaner air mass across the UK.
